

MK1 ONE

THE WORLD CHAMPION'S Gate

ETON 2006 World Championships
Instant Throttle Response

Shock Absorbing System

Designed for Racing...

Instant lock - Quick release

one handed operation

Sliding Security System

enables the gate to be locked closed

Standard bushes

this means the MK-1 is fully compatible with existing fittings

Wear indicators

lets you monitor the wear and tear on your oarlock and the life left in it

Engineering plastics

components are moulded in super tough glass filled nylon

Tension band

Shock Absorbing System moulded in high performance elastomer

Tension arm

Shock Absorbing System this patented system provides increased performance and comfort for rowers at all levels

Swing arm

when released it pivots away to allow easy placement and removal of oar

GOLD	GER M8+
GOLD	GER LM2-
GOLD	AUS AM1X
SILVER	NZL M2-
SILVER	FRA LM4-
SILVER	DEN LW4x
SILVER	GER LM8+
SILVER	NED AMX 4+
BRONZE	IRL LM4-
BRONZE	CZE M1x
BRONZE	ESP LW1x
BRONZE	NZL LM1x

ROWING

MK1

Shock Absorbing System

Designed for Racing...

NEW ROWLOCK
GENERATION
INSTANT THROTTLE
RESPONSE

The **MK1** was created to improve the boat performances.

Why a Shock Absorbing System (SAS) ?

New materials in our sport (carbon, Kevlar, honeycomb...) have allowed for lighter, higher performance within the boat design.

A new oarlock system has become vital to meet the changes evolving in this high TECH, high performance approach to sport... the old oarlock can no longer match these technological improvements.

Up until now, all rowers have just had to endure the persistent noise and reduced efficiency that has resulted from the constant slight sideways movement within the existing oarlock mechanism.

And so... the Shock Absorbing System (SAS) was born... a system to completely eliminate any sideways movement within the old oarlock mechanism while complying with all codes of the technical and regulatory requirements (set down by FISA):

- Not to modify the rower's customary actions
- A standard internal diameter able to fit all oarlock designs that comply with FISA standards.
- Interchangeable without any modification to the axial pin
- FISA approved
- An affordable price

Simple in Concept, Revolutionary in Action, the SAS (Internationally patented) offers the rower and boat a double advantage:

- It decreases the shocks on the boat rig and hull which gives superior support and stability
- After "the finish" the oar is held firmly on the MK1 seating which allows the rower to keep his full power for the catch.

Race starts

For race starts the oar remains perfectly positioned on the MK1 seating ready for immediate propulsion on GO.

The Instant Lock

Simple to use, the Instant Lock gives pleasure in the locking/unlocking of the oar in the MK1. The use at the wharf becomes as quick as a click.

The MK1 hold simultaneously stability + comfort + gliding = better support & performance

To row with the MK1 is to be at one with the boat and gets you ahead of your competitors with comfort and safety.

To row with the MK1
is simply Magik!
